A short bibliography of important literature on ICTs and education

This bibliography lists some of the more important and more rigorous recent evidence concerning the interface between ICTs and education. It provides the foundation for many of the arguments developed in this report, but not all of the material contained within it is cited specifically in the endnotes. The references are also listed here as a resource for those interested in gaining a deeper understanding about the complexities of reaching conclusions concerning the use of ICTs for education.

For the most comprehensive, rigorous and invaluable database yet produced on the evidence concerning education and technology, see the 401 items contained in the map and guidance prepared by Jigsaw Consult for DFID in 2017 entitled *DFID: Mapping Education Technology* available at https://jigsawconsult.com/case/dfid-mapping-education-technology.
